Ancient Evolutionary Discovery that Is the Carbon Laser (Supposition)

Make a lantern, add some lenses and burn a candle. The carbon smoke from the candle excites the light and creates a beam through the semi transparent lens. The semi transparent lens, allows only some light to get through, the rest bounces back, and excites. Repeat, and eventually the light condenses and you get a beam. **youtube.com : tinyurl.com/y3hzm5cc**

Mirror Mirror on the Wall, whose Satellites Stay in Orbit After All?

Mirage, NLP mirroring, Silver Mirrors and the Medusae events all have one thing in common. A central pivot concept that is obsessed with visual transmission. Besides satellites falling back into orbit routinely, such as the Mir russian space station, Probe B failed to prove general relativity. Early satellites in orbit are still in orbit, so what's the deal? China's Ghost Cities

Vast, sprawling, futuristic metropolises built in the middle of nowhere that nobody actually lives in. Imagine the set of The Walking Dead and you might get the idea. Or, at least, that's what we've been led to believe. In reality, those reports have been vastly exaggerated, and the cities described in them are far from empty. Yes, they're certainly underpopulated, but there's a very good explanation for it – they're brand spanking new!
